

Future Moms

Healthy, informed moms make for healthy babies.

Each pregnancy is different and mothers-to-be who are well-informed can make decisions that may result in healthier pregnancies.

Our specialized nurse health coaches, with expertise in pregnancy, have successfully supported more than 175,000 mother and mothers-to-be with prenatal health concerns since the program began in 1989.

We assist expectant mothers through:

- An assigned prenatal/postnatal nurse health coach who is supported by an on-site team of clinical specialists.
- A care management system that assesses risks to help ensure consistent, individualized education and support.
- Prenatal interventions based on the expectant mother's pregnancy status, complications, medical history and physician's plan of care.
- 24-hour toll-free nurse access line that assists the mother in making informed health care decisions. Bilingual registered nurses and services for the hearing-impaired are available.
- A maternity website with easy access to educational resources, as well as online enrollment and interaction with health professionals.

Future Moms goals:

- Help lower incidence of preterm births
- Help lower incidence of low birth weight births
- Help reduce pregnancy-related medical costs
- Help improve the ability of mothers-to-be to recognize signs and symptoms of complications
