

Off Campus Content Filter Authentication With iPads

When off campus, all iPads are filtered through our content filter. To access the Internet OR to use any apps that require Internet access, **you must authenticate by using your network login and password.**

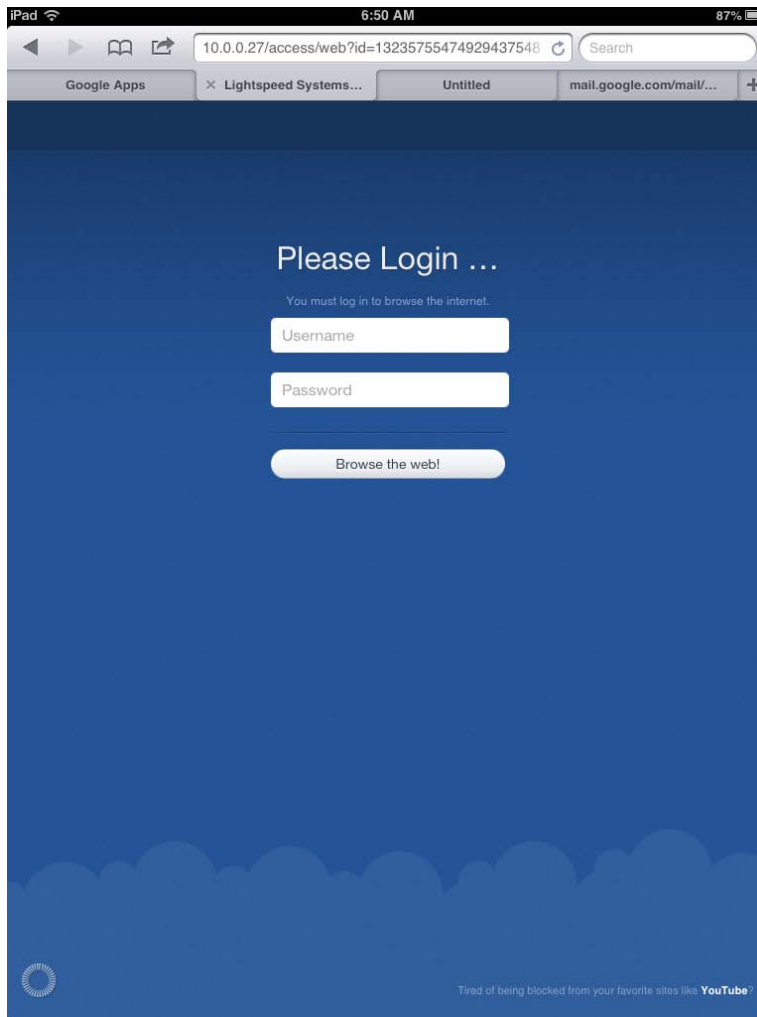

Once authenticated, you should remain authenticated for the time set in the content filter (currently 1 hour as of 11/8/2012, but our plan is to extend this authentication time to 4 hours).

Authentication Process

Open the Safari Browser and attempt to navigate to a web site.

You should get an authentication page the looks like the image below. You must be connected to the Internet to receive the authentication page and you have to be able to reach the Gideon School District network from your network in order to authenticate. (We have had some reports of slow authentication or instances where the authentication page did not open. If this happens, close the browser and try again. If this happens regularly, send an email to ipad@gideon.k12.mo.us and we will attempt to investigate the situation.)

Enter your network login for the username and your network password for the password and then click on “Browse the Web”.

**** Apps that require Internet access (such as the App Store and others) will not work unless you are authenticated. If not authenticated they may not load, give you a blank screen, or just not function if you are not authenticated.**
